

FINAL REPORT
SeoulGlow Skincare: Meta Ads Campaign Proposal

Course: Digital Marketing Capstone Project
Date: May 2026
Prepared by: Ashvini Ahire

1. Executive Summary & Business Overview

SeoulGlow Skincare is entering the highly competitive US skincare market by targeting consumers looking for the highly coveted "Korean glass skin" effect. This proposal outlines a targeted Meta Ads strategy designed to build brand awareness, drive engagement, and generate direct-to-consumer (DTC) sales for our flagship product.

By leveraging data-driven audience segments and high-converting creative formats, this campaign aims to establish a profitable and scale-able acquisition channel.

2. Campaign Objectives

Primary Objective: Drive online sales conversions for the Hero product via the e-commerce store.

Secondary Objective: Build brand equity, increase social media engagement, and gather pixel data for future re-targeting funnels.

3. Bid & Budget

The initial phase will operate on a daily testing budget to optimize creative performance and audience targeting before scaling.

Metric	Target Specification
Daily Test Budget	\$30.00 / day
Target ROAS (Return on Ad Spend)	2.5x
Target CTR (Click-Through Rate)	> 1.50%
Target CPC (Cost Per Click)	Under \$1.00

4. Target Audience Architecture

To maximize ad spend efficiency, the campaign will target a specific demographic with high intent and affinity for Korean beauty trends.

- **Demographics:**
 - Age : 18–35
 - Gender: Female
 - Location: United States

- **Detailed Targeting (Interest Clusters):**

- Sephora
- Ulta Beauty
- K-beauty (Korean Beauty)
- Cosmetics & Skincare interests

5. Creative Asset Specifications

The creative strategy relies on two distinct formats to capture attention in the feed and drive users to the landing page.

Creative Format 1: UGC Video

- **Format Type:** Short-form video (optimized for Reels and Instagram Stories).
- **Hook Line:** "If you are still trying to get Korean glass skin without rice water... stop."
- **Concept Visuals:** A relatable creator records a casual video showing their dull skin, applies the SeoulGlow Serum, and transitions to reveal a highly hydrated, glowing, and radiant finish.
- **Call to Action (CTA):** Shop Now.

Creative Format 2: Carousel

- **Format Type:** Multi-image swipable cards.
- **Card 1 Visual:** High-quality studio shot of the product packaging. (Text overlay: Glass Skin Rice Water Serum — \$28.00).
- **Card 2 Visual:** Close-up of texture and ingredients list highlighting Fermented Rice Water, 5% Niacinamide, and Hyaluronic Acid.
- **Card 3 Visual:** Side-by-side split showing consumer before-and-after results illustrating faded hyperpigmentation in 7 days.
- **Call to Action (CTA):** Learn More

6. Visual Identity & Creative Display Assets

7. Performance Monitoring & Next Steps

To ensure the success of the SeoulGlow Meta Ads campaign, performance will be evaluated weekly against our core KPIs. The implementation plan will follow a three-step phase:

Phase 1: Launch & Data Collection (Days 1–7): Deploy both the UGC Video and Carousel ads to the specified target audience architecture using the \$30.00/day testing budget.

Phase 2: Creative Optimization (Days 8–14): Analyze the Click-Through Rate (CTR) and Cost Per Click (CPC). Pause underperforming creatives and reallocate budget to the winning asset.

Phase 3: Scaling (Post-Day 14): Once a stable Return on Ad Spend (ROAS) of 2.5x is achieved, gradually scale the daily budget by 20% increments to maximize sales volume.

Conclusion: By combining a highly targeted audience segment (K-beauty and beauty retail enthusiasts) with high-converting creative formats, this campaign is structured to minimize acquisition costs while maximizing brand authority.

This strategic framework lays a scalable foundation for SeoulGlow Skincare's long-term digital growth.
